

# Accessories & Options

## Shade Controls

### Spring Roller

Spring roller shades are cost-effective and provide the smallest amount of light gap on inside mounts. These shades are available with an Auto Stop upgrade – a modified spring system that provides a slow release of the roll and allows the shade to rise slowly on its own.

*Available Options:*

- Decorative hems (except styles with accent rods)
- Decorative Pulls

### Continuous Loop Control

Continuous loop is an excellent control option for larger, heavier shades as a clutch mechanism reduces the force necessary to raise the shade. The shade is raised and lowered by a color-coordinated plastic bead chain which can be located on either end of the shade.

*Available Options:*

- Decorative hems (all styles)
- Aluminum or wood bottom bars
- Cassette system to enclose and hide the roller, with matching fabric insert (shown right)

### Motorized

Motorized roller shades can operate individually or in groups. Motors are hidden in the shade headrail and are battery-operated (plug-in power is an available option). Motorized shades are operated by hand-held remote controls.

*Available Options:*

- Decorative hems (all styles)
- Aluminum or wood bottom bars

## Bottom Bars

### Aluminum Bottom Bar

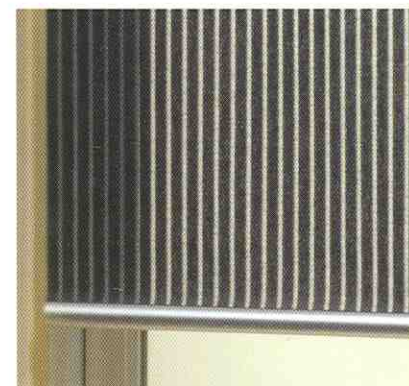

Available in two colors with color-coordinated plastic end caps. White bottom bars are supplied with white clutch components and chains. Silver bottom bars are supplied with gray clutch components and chains.

*Silver*

*White*

### Wood Bottom Bar

Available in five colors; Clutch components and chains are color-coordinated with the fabric you choose.

*Natural*
